

POST-TREATMENT CARE

ROOT CANAL TREATMENT

- Mild tenderness or sensitivity for a few days is normal.
- Over-the-counter pain relievers (ibuprofen or acetaminophen) are usually all you need.
- Take any prescribed medications as directed.
- Avoid chewing on the treated tooth until it is fully restored.

ROOT CANAL RETREATMENT

- You may experience similar tenderness to a first-time root canal.
- Discomfort may last a little longer due to inflammation.
- Take medications as directed and avoid biting on the treated tooth until it is restored.
- If a temporary filling was placed, keep the area clean and dry.

MICRO ENDODONTIC SURGERY

- Some soreness, swelling, or bruising may occur for several days.
- Use prescribed medications as directed. Over-the-counter pain relievers can help.
- Apply an ice pack to the outside of your face for 10–15 minutes at a time for the first 24 hours.
- Avoid strenuous activity for 24–48 hours.
